

Coffman Experience

ELECTRICAL ENGINEERING

From power distribution to audiovisual systems, we have knowledge and experience to design electrical systems for a wide range of project types.

Experience: from schools and hospitals to pump stations and taxiway lighting, our knowledge base is broad and our project experience is diverse, encompassing institutional, commercial, and industrial projects.

Track Record: we designed a 42-story high-rise building in downtown Seattle and one client has returned to our electrical staff for ten years running for design of all of their aquatic facilities. This “return for more” is not a singular occurrence and our electrical department continues to cultivate lasting relationships.

Capabilities:

- Airport Runway Lighting
- Audiovisual Systems
- Cable Television Distribution
- Energy Economic Analysis
- Fire Alarm & Detection Systems
- Industrial Controls & Automation
- Lighting Design & Controls
- Medium Voltage
- Overhead/Underground Distribution
- Power Generation
- Power Quality Studies
- Security & Access Control Systems
- Substation Design
- Telecommunications
- Value Engineering Studies
