

Coffman Experience

INSTRUMENTATION & CONTROLS

Our engineers design and program instrumentation and control systems for a wide range of industries, including petrochemical, cement, wood, and aluminum.

Experience: PLC Systems, HMI Programming, Instrumentation, and AC Variable Frequency Drives – we have experience with all of these types of systems and understand how to integrate them.

Track Record: when Valco needed to install a new aluminum billet casting station, we designed, programmed, and started-up a PLC system to control the cooling water system and also interfaced with the billed caster control system and the plant SCADA system. When Ash Grove Cement needed to upgrade an existing relay logic panel for one of their terminals, we were able to specify and program a replacement PLC system to control the terminal. Our designs span commercial and industrial applications.

Capabilities:

- Complex Troubleshooting
- Control Panel
- Data Acquisition & Telemetry
- Instrumentation
- PLC & HMI Programming
- Project Management
- Startup & Commissioning
- System Assessment
- Systems Integration
